Work Experience

Apple Inc.(Contractor)   Software Developer   (March/2018 - present)

- Successfully delivered an authentication APIs for identity management of iOS devices (phone, mac, and watch)
- Created an API responsible for updating information in Oracle database and CouchBase of an highly secured iOS device.
- Continued monitoring production issues and debugged production problem in timely manners that minimized impacts on production quality.
- Always took initiatives on writing code from scratch to satisfy current requirements from different business cases.
- Reverse-engineered legacy code and then integrated new features to on-going production APIs
- Analyzed large Java code base to understand features of the platform.
- Standardized / simplified workflow of current platform for other developers to understand and utilize.
- Identified needed features, held group meeting to advocate / defend these features to be implemented
- Responsible for end-to-end development of an API from code requirements, code complete, QA, UAT and to production.
- Platform evangelist: Trained other developers to use this platform.

Apple Inc. (Contractor)   Software Tester   (Sep/2016 - 01/2017)

- Quality control for 30 versions of Siri's AI to recognize English and solely responsible for localization
- Ensured new versions of Siri able to recognize voice commands by creating many test cases. Contributed to localization of Siri platform
